MethodiCall On-Site is a sophisticated and highly effective approach to managing your organization's mobility and wireline communications usage.

You access reports and analysis using a web browser from the convenience of your desk. MethodiCall resides on your infrastructure for complete security and control.

### Here's how it works:

We work with your IT professionals to install MethodiCall at your site. We train your professional staff on the necessary data collection, aggregation procedures, and product configuration procedures. Then we train you on standard system usage and reporting functions. From there you access the system at your convenience to obtain usage reports and analysis that can be tailored to your needs.

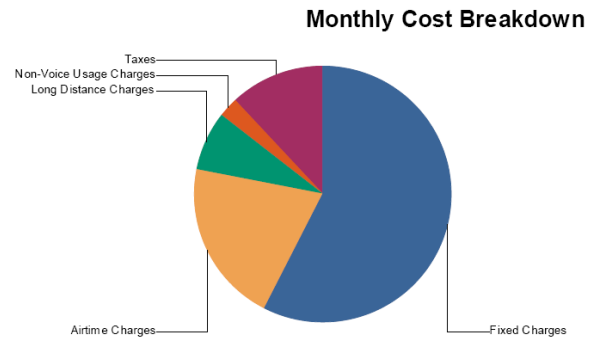

We are available to assist through our support staff who are only a phone call or email away. In addition, we provide updates to the product and support data through a convenient, integrated, online process.

MethodiCall On-Site is an effective way to distribute detailed management reporting on your mobile and legacy (PBX) communications usage. Managing wireless services and equipment usage is a unique opportunity to improved the bottom line by controlling a technology that has become a silent profit killer.

### Advanced System Features include:

- Cross-Carrier Analysis - allows you to see the big picture
- Automatic Distribution of End-User Reports
- Pooling Charge Re-allocation
- Advanced search and export capability
- Tiered user privileges

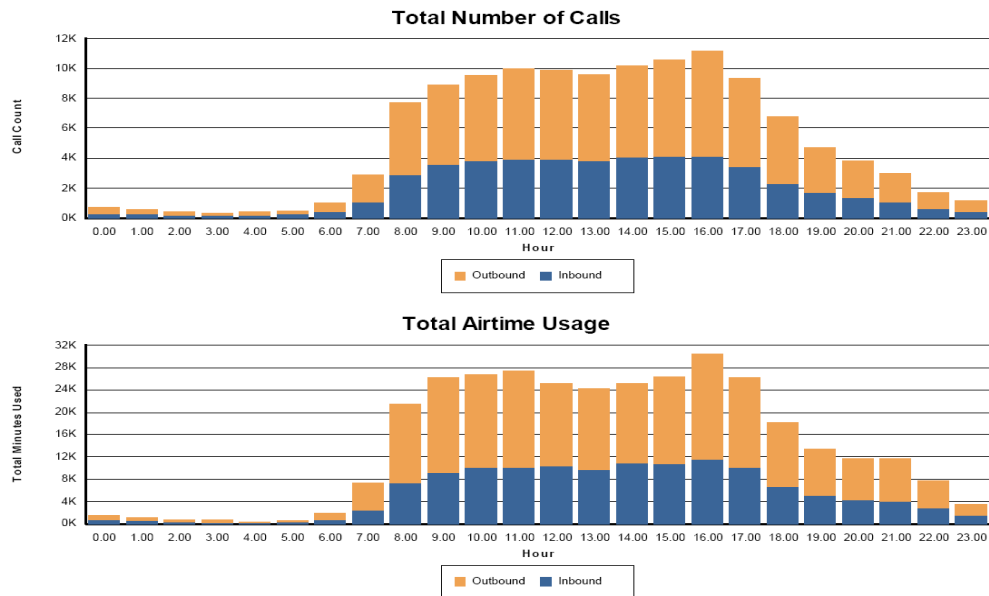

MethodiCall On-Site is designed for users who prefer the use of an On-Site solution. MethodiCall Online is identical to the On-Site package except that we maintain the infrastructure and perform the data collection for you. We are here to serve you, the package or service you pick depends on your own preferences.

## Available Report Categories:

- Analysis & Trending
- Call Detail

## Sample Graphical Report

## System Prerequisites:

The MethodiCall Server components require a PC compatible system with a minimum 1 gigabyte RAM and 2.0Ghz CPU speed, 20-gigabytes of available disk space (additional space may be required depending on data storage requirements), 1024x768 pixel - 256 colour video, and a CD-ROM drive are also required.

A minimum of Windows 2000 Server operating system or later with .NET Framework 2.0 is required. Disk partition must be formatted as NTFS. IIS 5.0 or later and MySQL 5.0 are also needed.

Please refer to the MethodiCall Software Product Description (SPD) for the latest, most comprehensive, list of prerequisites.

## Why Use Smart Thought?

Ours is a creative and proven solution. Smart Thought now supports and reports on a complete array of wireless devices as well as landline extensions from traditional and VoIP PBX systems. We are the only company that offers our unique services, both Online and On-Site, with successful results enjoyed by an extensive client
